

Multi-Carcinogen Interaction Synergy Scores

ExposoGraph interaction_engine: smoker_moderate_drinker profile; mechanisms include CYP induction, competitive inhibition, and GSH depletion

Data source: ExposoGraph.interaction_engine.compute_interaction_matrix() and decompose_synergy().
Cells with no modeled pairwise interaction are shown as 1.00; see CSV support column.
Dioxins/PCBs are modeled as TCDD/dioxin induction modifiers, not pairwise baseline-risk carcinogens.
